PROFESSIONAL PROFILE

AI Engineer with 3 years of experience in generative AI, from R&D to production: auditable agentic systems, RAG pipelines, industrialized LLM services. Background in insurance, automotive and healthcare.

TECHNICAL SKILLS

AI & ML:

- LLM, RAG, agentic systems (agent graphs)
- LLM service evaluation and observability
- ML, Deep Learning, NLP, Computer Vision

Languages:

- Python, TypeScript, SQL, R

Frameworks & Tools:

- LangChain, LangGraph, HuggingFace
- PyTorch, TensorFlow, Scikit-learn
- Docker, Kubernetes, MongoDB, Neo4j
- Azure AI, Git/GitHub, CI/CD, Claude Code

CERTIFICATIONS

Microsoft Azure AI Fundamentals
Microsoft Azure Data Fundamentals

SPOKEN LANGUAGES

French (Native)
English (Professional)

MOBILITY

Driving licence, open to relocation in France, remote or on-site

INTERESTS

Half-marathon, football, world cuisine

PROFESSIONAL EXPERIENCE

AI ENGINEER at *Relyens (Lyon)*

Dec. 2025–Present

- Co-designed the group's first agentic product for material liability claims handling: business process modeled as a graph, typed inputs and outputs at every step to audit the reasoning, hybrid deterministic and LLM steps, tested against live business APIs
- Production deployment, security hardening and documentation of SARM, an AI service delivered for the technology division
- Built AI solutions for claims compensation: automated document transmission slip (developed and packaged for production), conversational assistant over claim files deployed in a test environment
- Created internal libraries (LLM tooling, SDK) adopted by the Data Science team
- AI coding assistants lead: comparative tool evaluation, reports that drove the adoption of Claude Code, documentation of best practices
- AI enablement of business and technical teams (presentations, demos on real cases)

AI ENGINEER at *IVECO France (Lyon)*

Sept. 2024–Oct. 2025

- Introduced the first generative AI use cases in the engineering department (15+ engineers)
- Designed a multimodal RAG assistant over technical documentation (LangChain, ChromaDB, LlamaIndex)
- Multi-agent architecture to improve answer reliability and cut information search time for designers
- Collaborated with three international teams on digital transformation

DATA SCIENTIST at *Lille University Hospital (CHU de Lille)*

Mar.–Aug. 2024

- Structured data extraction from medical reports using open-source LLMs (Llama 3.1, Mistral 7B, Gemma)
- Deployed a local RAG pipeline (Ollama, ChromaDB, HuggingFace) under strict confidentiality constraints
- Unlocked 10+ years of unstructured medical data history for future clinical studies

DATA SCIENTIST at *ERIC Laboratory, University Lyon 2*

Apr.–Jun. 2023

- Integration and harmonization of periodic measurement data (500+ samples)
- Statistical modeling and predictive analysis with R and Python

PERSONAL PROJECTS & R&D

CLAIR, INCREMENTAL RAG PIPELINE FOR CLAIM FILES

2026

- Adaptation of the RAPTOR approach to evolving case files: hierarchical index updated as new documents arrive
- Research work aimed at scientific publication

SYNTHETIC HEALTHCARE DATA GENERATOR

2025

- Synthetic health data generation (GAN, VAE, LLM via Mistral API) preserving the statistical properties of real data
- Interactive interface for configuration and comparative analysis

EDUCATION

MSC IN DATA SCIENCE *ILIS, University of Lille*

2023–2025

BSC IN COMPUTER SCIENCE, DATA SCIENCE TRACK *University Lyon 2*

2022–2023

PROFESSIONAL BACHELOR IN SOFTWARE ENGINEERING *University of Lomé (Togo)*

2019–2022

SOFT SKILLS

MVP mindset and technical pragmatism • Explaining AI to business stakeholders • Cross-functional communication • Agile/Scrum project management • Multicultural adaptability
